

NEST DIVERTER

MANUAL INSTALLATION

SUPPLIES

- Nest Diverter, RGNS-36, featured here
- 3 super straps and buckles (not included) *
- Super strap tightening tool (not included)

RGNS-36

SS-AT-3/4

SS-BU-3/4
+ SS-BA-3/4

INSTRUCTIONS

Cut 3 super straps to fit through the nest diverter and around both cross arms, include an additional 6" for tightening. Add buckles to straps. Place nest diverter on cross arm so it is positioned close against the pole.

Secure the nest diverter by strapping it into position through the nest diverter's strap holes and around the cross arm so that the tail of the strap is pointing down. Feed the tail end of the strap into the open slot in the buckle. Repeat this process for the remaining 2 straps.

Use the super strap tightening tool to tighten each strap and secure the nest diverter into position.

Cut tails from straps once each strap has been securely tightened around the cross arms.
